Kerberos Commander PTT System Global Radio and Data Network

Global Coverage for Your Radio Network

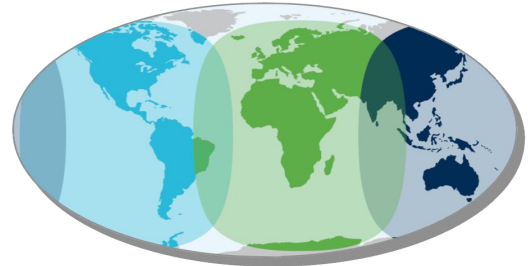

The Kerberos Commander PTT is a ruggedized terrestrial and satellite-based wireless communication solution. It seamlessly integrates your existing mobile, tactical or base radio communication equipment, into networks providing continuous coverage everywhere, Locally - Regionally or Globally; without the need for a single additional radio

Convert your existing radio network ...

From Local spotty ...

To GLOBAL seamless ...

The Kerberos Commander PTT solution automatically routes voice, data and AVLS traffic through the least expensive, best available network. It switches automatically between available 3G/4G/LTE/B14 and Satellite transport networks without any user intervention, transitioning seamlessly without dropping the connection.

WHEN YOUR NEAREST BACKUP IS 25 MILES AWAY – YOUR COMMS SHOULDN'T BE!!!

Kerberos Commander PTT Global Radio System
