

Kerberos International, Inc.

www.KerberosInc.com

Certified 8(a)

Woman Owned Small Business

Kerberos International provides holistic Information Operations, CVE, Community Engagement and RF Communications solutions for the US government and US allies.

DUNS: 788627466 | CAGE: 5TCB3

Facility Clearance: TOP SECRET

DCAA Audited Accounting System

NAICS Codes:

334220, 332994, 334290, 515111, 517410,
541330, 541511, 541512, 541611, 561612

Differentiators

- **We offer unique and effective Information Operations** solutions that empower local authentic voices and leverage the Arcivate® data model to map and measure results.
- **We combine senior engineers** offering experience developing military communications solutions with **savvy military and intelligence field operators** to deliver innovative solutions that **work in battle**.
- **We are a lean, highly responsive provider focused on customer satisfaction.**
- **We specialize in high performance, low-cost, small SWaP-C solutions that leverage the world's most cutting edge technology.**

Contact Information

Kerberos International, Inc.

Core Competencies

Innovative & Effective Information Operations and CVE Solutions

Holistic CVE approach that identifies positive voices promoting peace, democracy and human rights in our clients' areas of interest and works directly with those actors to increase their social network, thus empowering local, authentic, positive voices to greatly increase their influence in the region.

- **Environmental Information Analysis** – in-depth analysis of how populations both consume and share information in their daily lives - face2face and digitally – uniquely conducted via engagement with community activist groupings:

**Women ▪ Youth ▪ Business Owners
Media Producers ▪ Artists & Cultural Actors**

Portable C⁴/ISR and EW Solutions

Customized, man-portable, communications solutions. Robust remoteable, multi-function, multiband, full spectrum, collection, direction finding (DF) and HF/VHF/UHF surveillance and attack systems. Support for radio, satellite, telephone, Internet, video, GPS, RFID and specialized hardware & software. Ruggedized. Operates in austere environments using various power sources. We focus on the tactical aspects of SWaP-C.

Tactical Cyber & Electromagnetic Warfare (EW) Services

EW design, engineering and operations services produced and delivered by combat proven engineers and intelligence veterans. From initial concept, through design, to implementation and support, we bring concepts to life and reality to training.

R&D, Engineering, Design, and Systems Integration Services

Senior engineers provide advanced R&D, engineering, design, build, test and evaluation, implementation, and ongoing support of radio frequency (RF) and other communications solutions that range from large outdoor networks to small, handheld RF jamming devices.

- **Social Media Monitoring (SMM)** - We uniquely monitor social media to identify “movers and shakers” in our five target community activist groups.
- **Outreach Operations:** We assist clients to conduct interventions/outreach such as face2face focus groups with each of the five target groups to further empower local activists already promoting CVE messages.
- **Scientific Methodologies for establishing baselines and measuring the results of CVE activities** using sophisticated mapping methodologies that track not only the influence and changes in influence but also the velocity of changes in influence of the social media networks of activists with whom we are working.

Representative Past Performance

VARIOUS CLIENTS: Kerberos provides Information Operations services in multiple countries for various clients. Most of these programs involve a baseline survey (focusing on specific activist communities) and outreach activities to assist these activists (who are already promoting CVE content) to greatly increase their presence and expand their social networks – resulting in significantly increased influence by these local, authentic, genuine voices for positive lifestyles.

USCENTCOM: Kerberos provides engineering design, build, test, deployment, operation and support of multiple electronic warfare platforms for USCENTCOM.

US Army Research Laboratory (ARL) and US Air Force Research Laboratory (AFRL): Kerberos provides R&D, engineering and design services for the development of a man-portable, tactical, intelligent radio frequency (RF) jamming system that will automatically classify and attack various RF waveforms.

USSTRATCOM / Joint Electronic Warfare Center (JEWIC) OPFOR Branch: Kerberos provides various customized radio (RF) and satellite communications solutions, ruggedized electronic warfare (EW) trailers and radio system training.
